

That person just swallowed

Every time I drink something, I hear a gulp.

People around me can hear it clearly even on the train or bus.

When I eat or drink, if I touch my Adam's apple, I can clearly hear it moving upwards.

*Reference AI

In women, even when the vocal cords grow, the Adam's apple is small and not very noticeable, but in men, it is more likely to protrude.

The male hormone testosterone promotes the development of cartilage, which makes it easier for it to grow larger and causes the voice to become lower.

So, I haven't been told that yet,

If a child on the train says, "That person just swallowed it,"

Isn't it strange?

By the way...

① In Japan...

The singer and vocalist of "Mr.Children", Kazutoshi Sakurai, also has a protruding Adam's apple to the same extent as me...

② In the United States...

Furthermore, singer Daryl Hall of "Daryl Hall & John Oates" also has a protruding Adam's apple.

If I were to be made into a man, I think I would look more like

①, probably because I'm Asian.

Also, it's probably because I'm skinny that I stand out. Ballet has nothing to do with it... I've always been like that...

By the way, similar works have also been published previously on the Amazon shop.
