

## In this case...

### ☆Grateful for my miraculous birth

- ① Probability of being born as a human being → 1 in 50 trillion to 80 trillion
- ② Probability of being born as a Japanese person → Approximately 1.5% of the world
- ③ Probability of being born in a peaceful era from an objective standpoint

Therefore,

- ① You can find out by multiplying by the probability of (1 in 50 trillion to 80 trillion)  
× 1.5% × ③

Like winning the lottery first prize three times in a row...t

he probability is extremely close to 0

(Winning the first prize three times in a row like that would use up all your luck and be scary)

Incidentally, I haven't heard of many people becoming wealthy because of "~~~ lottery"

Apparently, there are many cases where it brings back memories of forgotten friends...

**With gratitude, gratitude...**
